...and care you need for the future.

Primary & Specialty Care
Establishing a relationship with a healthcare provider helps you prevent and detect health concerns before they become serious, as well as manage existing conditions. From pediatrics to family and internal medicine, or care from a specialist, it’s important to find a provider that’s right for you, so you can live a longer, healthier life.

For help finding a Treasure Valley healthcare provider, call (208) 367-DOCS.

Types of Providers
Saint Alphonsus providers are committed to delivering compassionate care that is tailored to your individual needs.

Family Medicine
Family medicine provides comprehensive care for people of all ages including geriatric, pediatric, and gynecologic care. Establishing a life-long relationship with a family medicine provider offers continuity of care and support for the entire family. They help you stay healthy through preventive and routine screenings, as well as diagnose health concerns early for better outcomes.

Internal Medicine
Internal medicine providers are specially trained to diagnose and treat chronic and complex medical conditions, often caring for patients 18 years and older with more than one disease.

Pediatrics
Pediatricians care for infants, children, and adolescents, providing compassionate care in partnership with parents to help children grow up healthy. From well-child visits and immunizations to diagnosing and treating illnesses, pediatricians play an important role in the growth and development of the early and very important years of a child’s life.

Advanced Practice Provider (APP)
Advanced practice providers (APPs), including nurse practitioners (NPs) and physician assistants (PAs), are certified to care for a variety of medical needs ranging from general care to highly technical procedures. They often work closely with physicians and other providers in a collaborative team-based approach to ensure you receive the best care possible.

Medical Doctor (MD) & Doctor of Osteopathy (DO)
A Medical Doctor (MD) is a licensed physician who practices medicine focused on the diagnosis and treatment of human diseases, providing recommendations based on scientifically-proven conclusions. A Doctor of Osteopathy (DO) has additional training in Osteopathic Manipulative Treatment, a set of hands-on techniques to help diagnose and treat illness and injury.

Specialist
Specialists are doctors who have completed advanced education and clinical training in a specific area of medicine.

Obstetrics and Gynecology (OB-GYN)
Obstetrics and gynecology (OB-GYN) is the medical specialty that deals with pregnancy, childbirth, the postpartum period (obstetrics), and the health of the female reproductive systems. From routine exams to labor and delivery, OB-GYNs focus on women’s health from late adolescence through adulthood.

Midwife
A midwife is a trained health professional specializing in pregnancy and women’s reproductive health. From prenatal care to delivery and postpartum, midwives are essential in helping women achieve the best pregnancy experience possible.

For help finding a provider in the Treasure Valley, call (208) 367-DOCS.
Maintaining Good Health

Playing a proactive role in your healthcare is an important part of preventive medicine. Getting routine medical evaluations throughout your adult life helps to identify health concerns early on before they become serious, so you can treat them sooner for better outcomes. Here’s a general timetable to help guide you.

Please note, this does not take into consideration any existing symptoms, chronic conditions, or family history.

Nutrition
Following a healthy diet can lower your risk of conditions like diabetes, heart disease, hypertension, stroke, and cancer. Here are some general tips to help guide you, according to the Academy of Nutrition and Dietetics.

- Eat at least 5 servings of fruits and vegetables every day
- Eat more legumes (like beans and lentils) and more whole grains
- Try meatless alternatives like eggs, beans, peas, soy-based foods, and nuts for protein
- Keep your salt intake to a minimum (less than 2,300 milligrams per day)
- Limit your daily sugar intake
- It is better to eat unsaturated fats than saturated fats and avoid trans fats as much as possible
