PARTNERING WITH PRIMARY CARE FOR SEAMLESS SPINE CARE

- Degenerative spine conditions
- Spinal stenosis & herniated discs
- Spondylolisthesis & spinal deformities
- Spinal tumors & trauma
- Failed back surgery syndrome

WHEN TO REFER A PATIENT TO SPINE SURGERY

- Persistent radicular pain not responsive to conservative care (6+ weeks)
- Progressive neurological deficits (weakness, numbness, gait changes)
- Spinal instability or deformity
- Cauda equina symptoms (bowel/bladder changes, saddle anesthesia)
- Failed conservative management (PT, injections, medications)

BEFORE REFERRING

- Order imaging: MRI or CT of affected spine region
- Document conservative treatment: PT, medications, injections
- Assess comorbidities: diabetes, smoking, obesity, cardiac clearance
- Include prior surgical history & relevant records
- Encourage smoking cessation & weight optimization

PROGRAM HIGHLIGHTS

- O-arm® Surgical Imaging System: Real-time 2D/3D imaging for precise hardware placement, 360° visualization
- Stealth Navigation Technology: GPS-like guidance for millimeter-level accuracy
- Post-op care coordination for relocated patients
